your roadmap to Peak Smart Home

Thank you for your interest in Peak Smart Home! Together we can help shift electricity use during peak times to ease the pressure on the power grid, improving reliability when Yukoners need it most. To guide you through the program, we've created this document highlighting important steps along the way.

Step 1

Make sure your home is eligible at peaksmart.ca/sign-up.

Step 2

Review the list on peaksmart.ca/rebates to see if your device is eligible.

If you don't already have a device, the rebates page offers details on where and how to buy.

Step 3

Install your device.

If you'd like installation support, visit the Good Energy providers webpage for a list of contractors familiar with Peak Smart.

Step 4

Enrol your device. This final step depends on which brand of device you have.

sinopé

For Sinopé products, enrol directly through the Neviweb App for Android or Apple.

Take a screenshot of the screen showing your enrolled devices – this will be requested in the rebate application.

mysa

For Mysa products, enrol online at enroll.mysa.cloud/dr.

Once you've enrolled, Mysa will send you a confirmation email. Either screenshot this email or save it as a .pdf file – this will be requested in the rebate application.

get up to $1,500 in rebates per home

Once you've joined Peak Smart Home, you can apply for a rebate. There are rebates available for thermostats and hot water tank controllers (plus leak detection accessories) enrolled in Peak Smart Home that cover up to 100% off purchase and installation costs – up to $750 per device – with a maximum of $1,500 in rebates per home.

With your device purchase receipt, installation receipt (if applicable), and proof of enrolment, you are ready to submit your rebate application.

Apply for a rebate at peaksmart.ca/rebates.

You've now joined Peak Smart and are helping the Yukon shift the peak!
